DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 10-27 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In each of the independent claims, the extent of the "first regions" and of the "second regions" is not clear. The claim language defining these regions says only that "the regions are spaced apart from each other by interposed isolation regions." Does this mean that the "first regions" and the "second regions" each extend at their edges to contact the isolation regions? This is apparently the intention of the claim language, because at least claim 23 discusses removing "substantially all of the silicon layer only in said one or more first regions." So one could understand the intention to be that the silicon layer is removed all the way up to the isolation region (unlike the silicon layer in figure 13B of Fitzgerald). However, read literally, the "first regions" and "second regions" need not extend to contact an isolation region, if "interposed" isolation regions mean merely that somewhere between the two regions there is an isolation region. So does the claim language of "interposed isolation region" mean an isolation region that contacts the first and second regions, or an isolation region that merely lies somewhere between the two regions?
